The 2 Hour Smile Hands on Course: edelweiss dentistry DIRECT SYSTEM with VENEER and OCCLUSIONVD

About

As a dentist who is interested in always offering the best for your patients, you should take a look at the minimally invasive & economical edelweiss DIRECT VENEER SYSTEM. By combining and adapting the latest composite and laser technology, edelweiss dentistry has made a quantum leap in the future of minimally invasive dentistry. The laser process combines the best of two worlds: a homogeneous, inorganic and maximum gloss surface with a thermally tempered and dynamic composite core. Thus, an optimal integration in function and aesthetics is achieved.

Bio-Aesthetics & Function combined in one system

The edelweiss OCCLUSIONVDs represent the anatomical foundations for single or complete reconstructions and for increasing the vertical dimension (OVD) in the posterior region.

Hence, functioning anterior cuspid guidance can also be obtained using edelweiss VENEERS.

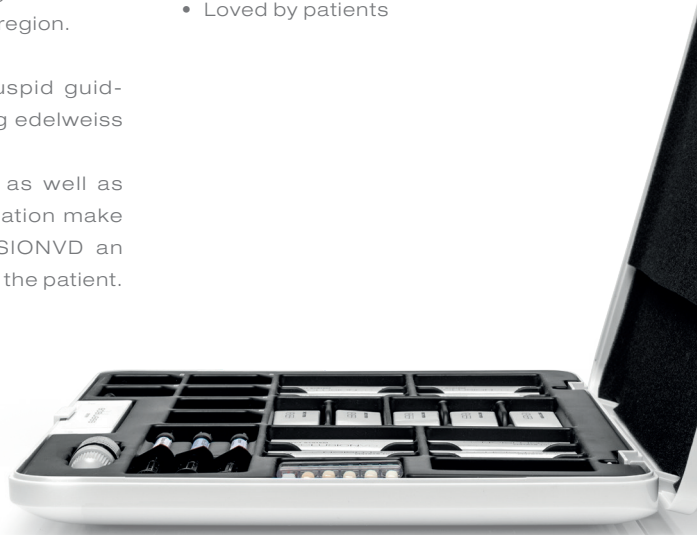

The versatility of applications as well as the time and cost saving application make edelweiss VENEER & OCCLUSIONVD an investment in the future – also for the patient.

Indications

- Anterior and posterior restorations
- Tooth discolorations
- Anatomical deformities
- Diastema
- Erosion & Attrition
- Customized Veneers, Crowns & Bridges
- Crown facings
- Lifting the vertical dimension (CMD)

Advantages

- 10 Year tested
- One appointment
- Minimally invasive
- Natural looking
- Long-lasting
- Biomechanical
- Antibacterial
- Economical
- Laser technology
- Loved by patients

April 22nd 2022

There are only 8 places, so please let us know as soon as possible that you want to reserve a place.

Jason Greenwood
BDS

Presented by

Dr. Jason Greenwood will be presenting the course. Being an owner of 3 Cerec systems, he was extremely sceptical that edelweiss VENEERS could add anything to his offering. However, having had a long discussion with Claudio Novelli, who has fitted over 3,000 edelweiss VENEERS, apart from other conventional methods, he was interested enough to try for himself. He saw that this was a system he could offer patients who might not be able to afford ceramic, or wanted a quick and yet superior quality turnaround.
